

Supplementary Fig. 1: Anti-TSST-1 serum antibody levels stratified by sex and age. Anti-TSST-1 IgGt, IgA and IgG4 antibody levels were quantified using the xMAP® technology and stratified by sex (a) and age (b)(S3). Box plots display median along with the 25 and 75 quartiles, whiskers depict the 25th quantile minus 1.5*IQR and 75th quantile plus 1.5*IQR. Probability density shown as violin plots. Statistics: unpaired Wilcoxon rank sum test (A), non-linear regression using LOESS function (B); X, fold-change between median values.
