

Imagery and Motor Processes – When are They Connected?  
The Mental Rotation of Body Parts in Development

Supplementary material for:

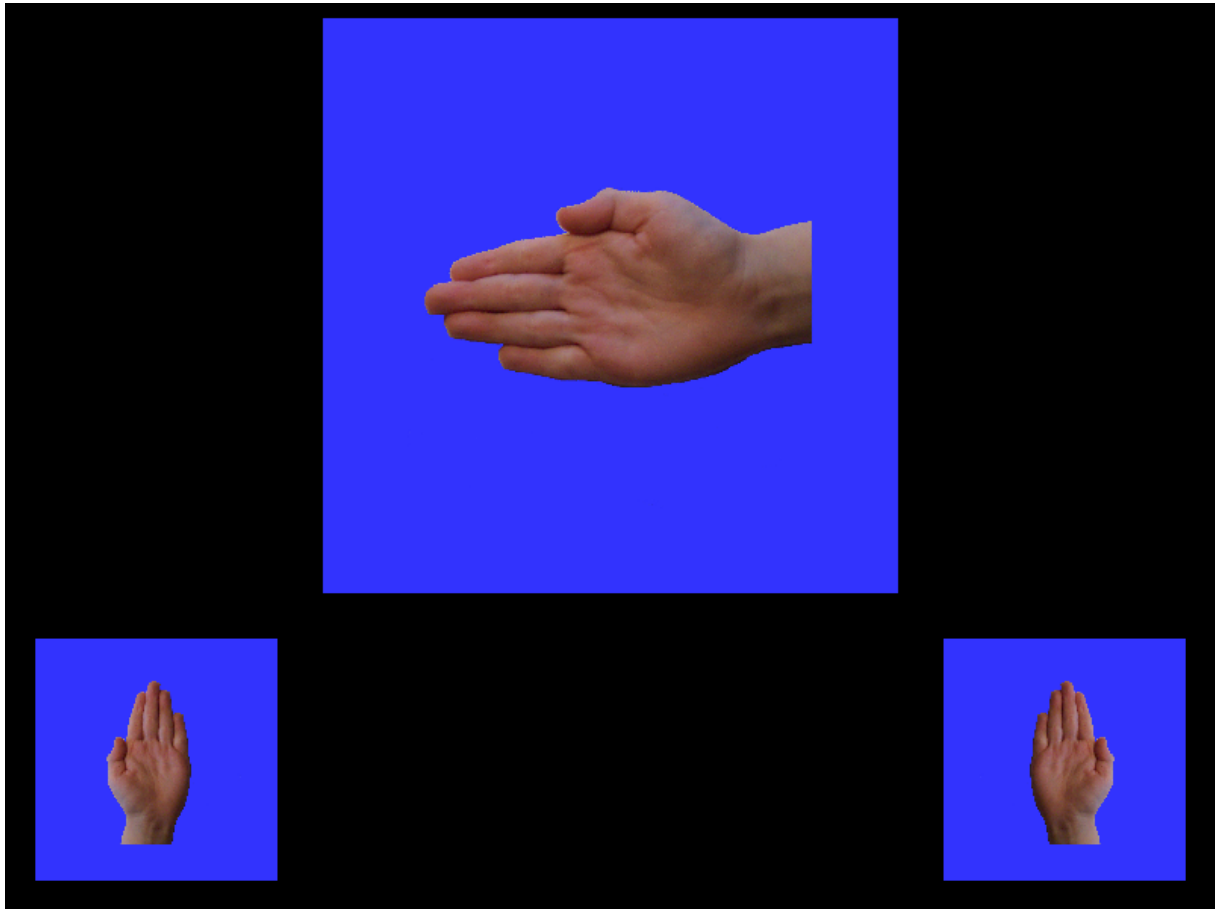

Imagery and Motor Processes – When are They Connected?  
The Mental Rotation of Body Parts in Development

*Journal of Cognition and Development*

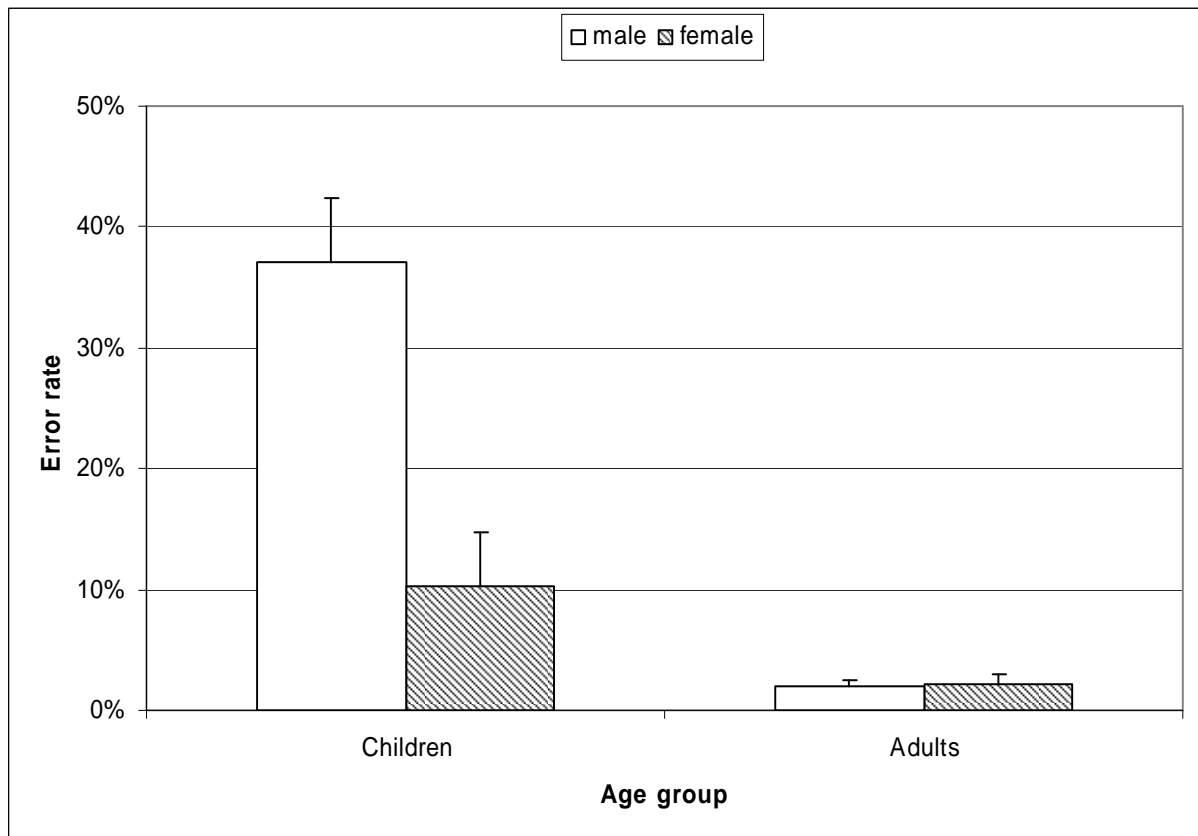

Markus Krüger and Horst Krist  
Ernst-Moritz-Arndt-Universität Greifswald, Greifswald, Germany

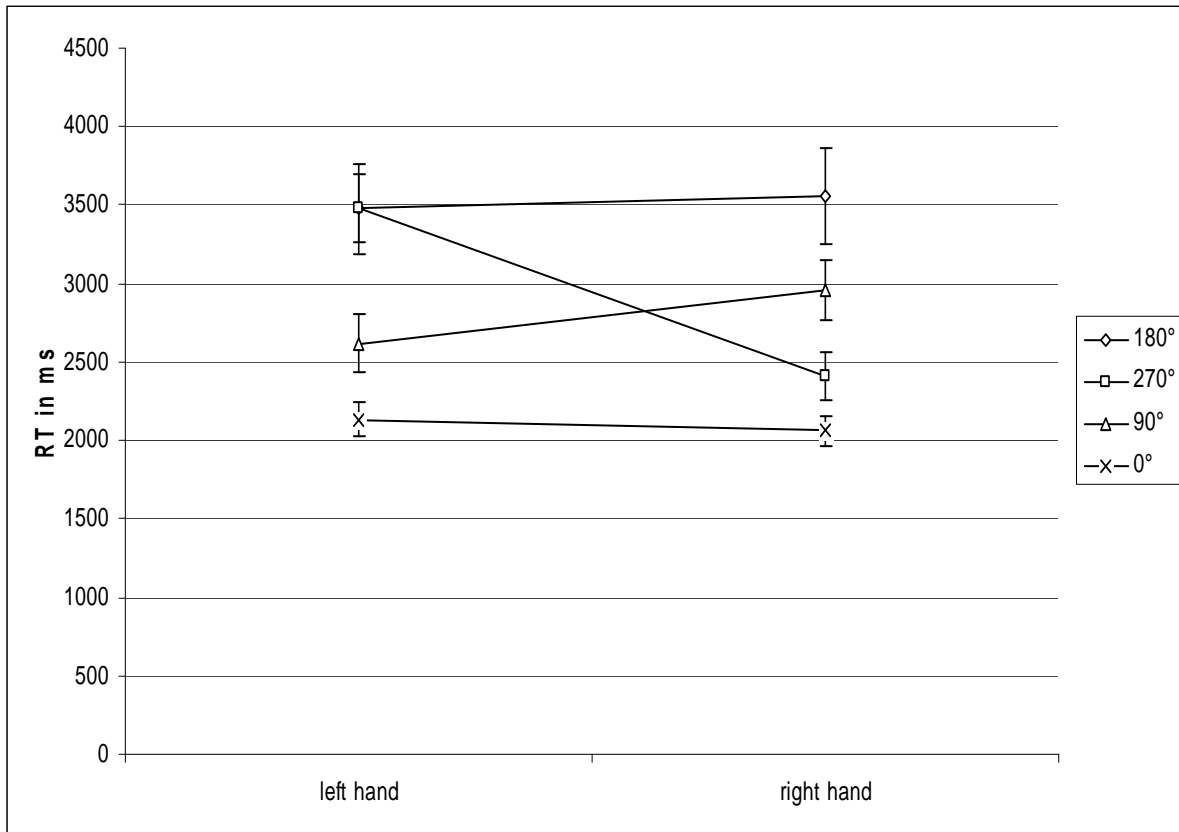

Example of a stimulus configuration in Experiment 1: The left-oriented non-body stimulus at 135°.

Example of a stimulus configuration in Experiment 2: The right-oriented stimulus at 270°.

Error rate (in percent, with error bars) for male and female participants from the two age groups (Experiment 1).

Mean reaction times (and standard errors) as a function of angle of rotation and orientation

(Experiment 2).
